Approach of ITS to Development of Road Maps and Action Plans: Role of TEG on Standardisation

Dr. V. Petrenko

Senior Standardisation Expert (Gas and Electricity)

London, 8-9 July 2013

Methodology

Our approach is «**a partnership oriented on the result**». Practically, it means a joint development together with a Country-beneficiary of a plan how to implement it.

The first step is the creation of the network in which each national unit should include all the stakeholders and find a balance between the decision makers and implementers.

Changes in TEG on Standardisation

Unfortunately, the established TEG on Standardisation does not fully meets these requirements.

The TEG should:

- Represent all the interested parties, that requires an increase in Committee's members
- Engage all the participants entitled to make decisions on behalf of their organisations
- Be a forerunner of future European-style Technical Committees (TC)

Working Meetings

In each Partner Countries 2 working meetings are planned.

The first one when developing a basic proposal or Road Map and Action Plan drafts.

The second one when discussing the final documents.

Constructive and inclusive meetings are key to success

Overarching Goal (Top Priority)

To create conditions for adopting and implementing European and international Gas and Electricity standards in the INOGATE Partner Countries.

Tactical Goals

- Evaluation of the real state of play in the systems of Standardisation and Technical Regulation in Partner Countries and detection of the key breaks with the European practice
- Identification of the Country's priority Gas and Electricity standards and the state of play with their harmonisation

Tactical Goals (2)

- Identification of essential needs of PCs in creation and improvement of efficiency of the TCs as key elements in the Programme of Improvement of NSB's efficiency as a whole
- Development of an effective tool of obtaining European standards, translation and dissemination of the translations of standards in the INOGATE Partner Countries to speed up their adoption

Key Aspects

- Joint identification of the target indications for the Road Map.
- Development of the Road Map by the TEG and Project's experts.
- Development of the Action Plan which incorporates both the country's efforts and Project's assistance. All the AHEF should aim to implement the Action Plan.

Development of Draft Road Map and Action Plan

Month	1	2	3
Development of the structure and concept of the Road Map and Action Plan	█		
Analysis of the background information, development of the questionnaire to fill in the gaps, collection of the information	█	█	
Preparation of the basic proposal, target profiles and indicators	█		
Development of a draft Road Map and Action Plan			█

Presentation and Discussion of the Road Map and Action Plan

Month	1	2	3	4
<ul style="list-style-type: none">• Working meetings in each Partner Country• Collection and compilation of proposals• Identification of scope and terms of finalisation• Adjustment of target profiles and indicators				

Finalisation of Road Map and Action Plan

Months	1	2	3	4	5	6	7
Preparation of the 2 nd draft of Road Map and Action Plan							
Final Discussion and adjustment							
Development and presentation of the Road Map and Action Plan. Concluding meetings in each Partner Country							

Key developers from the Project

- Senior Long Term Standardization Expert – Viktor Petrenko
- Senior Short Term Standardization Expert – Leonid Malov
- Senior Short Term Standardization Expert – Volodymyr Yakubov
- Senior Short Term Standardization Expert – Robert Jeanjean
