The Concept of the Road Map and Action Plan

V.E. Petrenko, Doctor of Engineering
Senior standardisation expert (gas and electricity)
London, July 8-9, 2013
Organisational links between a ROAD MAP and an Action Plan

The section shows the links with:

• The INOGATE Programme objectives; and
• The national plans and programmes (not necessarily for standardisation only)
Definitions

The Road Map is a document defining the current state of the country and the planned targets and indicators.

The Action plan defines the actions of the country which are necessary for the achievement of these targets and the required assistance of the project.
Background for the creation of the Road Map and Action Plan

- Analysis of possible approaches to addressing the issue of standards harmonisation,
- The experience and legacy of the previous projects; and
- Necessary legal framework.
The results of the analysis of harmonisation process in the region and in the country

- Standardisation and technical regulation systems
- Priority standards of gas and electricity sectors: regional and national priorities
The structure of the ROAD MAP and Action Plan

- The objectives of the country, the main indicators and the key milestones of the harmonisation of standardisation system, and the legislation on standardisation in line with the principles of the EU New Approach
The structure of the ROAD MAP and Action Plan (2)

- The objectives, main indicators and key milestones of the capacity building and strengthening of the potential of national standardisation bodies (NSBs) and the respective agencies (national institutes of standards).
The structure of the ROAD MAP and Action Plan (3)

• Development of the national programme of adoption of priority gas and energy standards
The structure of the ROAD MAP and Action Plan (4)

- Development of the national programme of adoption of priority gas and energy standards
The structure of the ROAD MAP and Action Plan (5)

- Assistance to the national Technical Committees for gas and electricity.

National technical committees should become the focal point for standardisation in gas and electricity sectors at the national level and ensure the necessary infrastructure for participation in the process of standardisation of the national industry and other stakeholders.
The structure of the ROAD MAP and Action Plan (5)

- Assistance to the national Technical Committees for gas and electricity.

National technical committees should become the focal point for standardisation in gas and electricity sectors at the national level and ensure the necessary infrastructure for participation in the process of standardisation of the national industry and other stakeholders.
The structure of the ROAD MAP and Action Plan (6)

• Raising awareness on gas and electricity standards applied in the EU

• Transfer of the EU best practices in the area of application of gas and electricity standards
Thank you for your attention!
