

AD-HOC TECHNICAL ASSISTANCE PROJECT

AHEF No. KZ 7**Project Title****Conditions and charges for transmission connected customers – EU Practice Review****Country (s)** Republic of Kazakhstan**Timescale for implementation** June 2010**Beneficiary(s)**

Kazakhstan Electricity Grid Operating Company (KEGOC)

Main and specific objectives

The overall objective of the assignment was to present EU experience and applied practices with electricity connection arrangements. The specific objective was to address the technical and economic framework associated with the connection of large demand users (loads) to the transmission system voltage level.

The beneficiary's request for support was limited to getting acquainted with the available methodologies, practices and experience in the EU in order to analyse them and come up with their own conclusions for further action to be taken.

Results achieved

The awareness of high level staff of the beneficiary on EU practices was improved enabling them to do analysis and make decisions in their own context. The SEMISE team did not produce any recommendations as to the set-up of the organisation and future practices in Kazakhstan.

Useful information/ relevant documents
